

BIOLOGICAL FIELD STUDIES

STAPHYT enables you to **test your products and your varieties in the field** in all main European agricultural areas.

On our field stations or with our farmer partners, we can set up your trials on a wide range of crops (perennial, arable, vine, top fruit, ornamentals) in the field or under cover according to your specific requirements.

Our teams of agronomists and technical coordinators network on the whole European territory.

We test all types of product:

- Fertilizer products: fertilizers and amendments
- Seed treatments
- Adjuvants, Activators or growth retardants
- Agrochemical products (*herbicide, fungicide, insecticide, acaricide, nematocide, molluscide*)
- Bioproducts

YOU NEED

- **Renowned expertise** on all crops
- **To study, evaluate, screen your products** in all the main agricultural areas in Europe in the different regulatory zone
- **To support your research programs and your biological dossiers** with useful and certified experimental data
- **To support and promote your sales**

OUR EXPERTISE

- Research/screening trials
- Efficacy and crop safety registration trials (GEP)
 - Dose justification and practical value trials
 - Drifting trials on adjacent crops
 - Persistence trials on following crops
 - Demonstration/sale support trials
- Field or under cover trials (vegetables and ornamentals)
- Varied irrigated or misted platforms (cereals, potatoes, vine...)
